

1 28. (New) The method of Claim 27 wherein said step of first
2 providing further provides for the processing of the display data of said first
3 class of applications to produce transformed display data for a predetermined
4 application program of said second class of application programs.

1 29. (New) The method of Claim 28 wherein said step of selectively
2 coupling enables said multi-tasking operating system to access and further
3 process the display data provided in the one of said first and second data
4 structures selectively coupled with said multi-tasking operating system.

1 30. (New) The method of Claim 29 wherein said step of first
2 providing operates with said step of selectively coupling to couple said first
3 data structure with a first display driver that provides for the transformation of
4 display data from said first data structure into said transformed display data.

1 31. (New) The method of Claim 30 wherein said step of managing
2 provides for the routing of said transformed display data to said client
3 computer system.

1 32. (New) The method of Claim 31 wherein said step of second
2 providing operates with said step of selectively coupling to couple said second
3 data structure, including said transformed display data, with a second display
4 driver.

1 33. (New) The method of Claim 32 wherein said predetermined
2 application program provides display data to said second data structure to
3 represent a host display window and wherein said first display driver provides
4 for the transformation of the display data from said first data structure to
5 relative display coordinates mappable onto said host display window.
